

JAM is a startup located in Berlin, that launched the successful Music Maker JAM app on both Android and iOS and is expanding its portfolio.

WE ARE NOW LOOKING FOR AN EXPERIENCED **BACK END DEVELOPER** TO JOIN OUR AGILE TEAM.

Your role

If you want to be part of a development team that creates an amazing mobile app for millions of music fans around the globe - from scratch - then this is the right job for you!

You will be one of the initial members of a new team to rapidly prototype new ideas and establish the technical infrastructure for the backend of a new app on iOS and Android. Your focus will be to design, build, maintain and secure a platform that users expect from state-of-the-art apps on a big scale. Your work will result in a high class social freemium app for user generated music with a heavy dose of gamified elements... and contests. Become part of a small team of professionals with a flat hierarchy and get inspired by a technology that is built upon years of experience from creating globally successful music creation software.

Required Skills

We assume that you have several years of relevant professional programming experience, however individuals with extreme talent will always be considered. You are capable of delivering well-structured code that finds the right balance between quick results and maintainability. Required skills are:

- Professional experience in developing backend interfaces for mobile applications by using object-oriented programming languages like PHP, JavaScript or Java
- Successfully finished studies in informatics or similar fields. Alternatively, graduated as a qualified IT specialist with several years of work experience
- Profound knowledge with modern frameworks like symfony3, node.js or any other framework you have extensive experience with
- Design and development of relational and non-relational databases i.e. MySQL, MongoDB
- Integration of cloud services like Amazon-S3, push providers
- Capable of taking on the technical responsibility for a product
- High sense of code quality and security
- Experience in teamwork and agile development, especially SCRUM

Applicants with bouncy bonus skills in one of the following areas are preferred:

- Knowledge of modern caching systems and versioning tools
- Web-technology and integration of web-services and social platforms
- Passion for music and gamification

Want to join the team that builds the next big music community?
